Short Answer Prep: Review your notes, text readings, and in class work to use when answering the following questions. Your answers should include details from your notes, text readings, class work and apply as much of your vocabulary as possible.

- 1.) What does agriculture have to do with climate change and population growth?
- 2.) What distinguishes each of the three phases of the agricultural revolution from each other? How do these create advantages and disadvantages for different places?
- 3.) What areas of the world were more geographically lucky in terms of agriculture? Less lucky? How has this impacted these areas today?
- 4.) How do you see the different phases of the agricultural revolution in the photos you looked at of people's current diets?
- 5.) What do you feel are the most concerning modern agricultural problems (refer to your notes from "gallery walk" maps and Collapse)? What areas in the world and the US are most at risk for these problems?
