13 Plan B/ EC

- A. Male removes penis prior to ejaculation, dangerous because of precum, which contains sperm.
- B. Abstain from unprotected sex during "fertile" time, unreliable because you don't know when you are ovulating.
- C. Given by a physician once every 12 weeks, stops ovulation.
- D. Can be purchased over the counter, worn once on penis, prevents sperm from reaching egg.
- E. Physician inserts sub-dermal (under the skin) for up to 3 years, stops ovulation.
- F. Take one each day, stops ovulation. After 3 weeks, female will menstruate.
- G. Inserted into the uterus by a physician, can be left in place for up to 7 years, stops ovulation.
- H. Inserted into the vagina at the base of the cervix, acts as a barrier to stop sperm from reaching egg, left in place for 2 hours post-intercourse, used with spermicide.
- I. Worn on skin for one week, new one each week. Stops ovulation; during 4 week menstruation occurs.
- J. Inserted into the uterus by a physician, increases cervical mucous and repels sperm away from uterus.
- K. Taken within 72 hours of unprotected sex, starts menstruation.
- L. Can be purchased over the counter, one ring is inserted into the vagina other ring protects the vulva. Stops sperm from reaching egg.
- M. Inserted into vagina at the cervix, left in place for 3 weeks, remove during 4th week which triggers menstruation.
